EXECUTIVE SUMMARY

EXE-1

The West Valley Demonstration Project was established to demonstrate that technologies could be developed to safely clean up and solidify radioactive waste.

INTRODUCTION

INT-1

An environmental surveillance and monitoring program was developed and implemented to ensure that operations at the WVDP would not adversely affect public health and safety or the environment.

ENVIRONMENTAL COMPLIANCE SUMMARY: CALENDAR YEAR 1998

ECS-1

Project activities are governed by federal and state regulations, Department of Energy Orders, and regulatory compliance agreements.

CHAPTER 1. ENVIRONMENTAL MONITORING PROGRAM INFORMATION

The radionuclides monitored at the Project are those that have the potential to contribute a dose above background or that are most abundant in air and water effluents discharged from the site.

CHAPTER 2. ENVIRONMENTAL MONITORING

The West Valley Demonstration Project's environmental monitoring program includes monitoring and sampling of liquid and air effluents both on- and off-site. Deer, fish, milk, hay, and various fruits and vegetables also are sampled.

CHAPTER 4. RADIOLOGICAL DOSE ASSESSMENT

Because of the difficulty of directly measuring any dose contributed by the WVDP to the off-site environment and the public, computer models are used to calculate dose estimates. Estimates are based on concentrations of radionuclides measured in air and water collected from on-site effluent points.
